**10th Global Prevalence Study on Infections in Urology**

Take responsibility for the future of urology - join today ▶

## About the European Association of Urology

For almost 40 years the EAU has addressed the most pressing issues of urological care in Europe, through its scientific and educational initiatives, as well as its publications.

The EAU delivers training, stimulates research, organises exchanges and broadcasts information. EAU Historybooks record the evolution of urology as a specialty, and the EAU Guidelines support urologists in their day-to-day practice.

More than 16,000 professionals have joined the EAU and together we create and explore numerous opportunities for professional growth and knowledge-sharing.

### 4th EMUC: major advances in systemic treatment still elusive, more research needed

Major advances in the systemic treatment of urological cancers remain elusive and cancer experts are one in saying that to achieve significant breakthroughs more research work is needed to overcome the lack of quality data that continue to impact on medical research.

### 4th EMUC: international, multidisciplinary approach is key in treating penile and testis cancers

Combined international efforts in both clinical and basic research are crucial for achieving significant breakthroughs in treating testis cancer, a disease which has seen increasing prevalence rates in recent years but with patients having higher survival due to better treatment options.

## EAU Support Fund

In 2000, the EAU Board founded the Support Fund, aiming to provide medical equipment to urological facilities which lack finances. In the twelve years of its existence, the EAU Support Fund has been able to provide support - urological equipment - to countries such as (amongst others) Georgia, Macedonia, Bosnia Herzegovina and Ukraine but was also able to contribute in the aftermaths of the earthquakes in Turkey and China.
